## Product Highlights

The VPX2703UC500-SA is a single-slot (5HP) power card for interoperable systems in alignment with the SOSA™ Technical Standards. This power converter offers filtered 270Vdc input and two outputs (+12V and +3.3V\_AUX DC). This COTS military power supply solution is designed to the applicable VITA 62 Modular Power Supply and VITA 48.2 conduction-cooled requirements. It also meets applicable portions of both the MIL-STD-810F vibration/shock requirements and the MIL-STD-461G EMI requirements. The VPX2703UC500-SA provides users with high efficiency (up to 92%) and high power (up to 500W). Additionally, the redundant IPMB bus and I2C functionality allows users to monitor sensor data (temperature, voltage, current, counter), obtain device ID, and retrieve self-test results per VITA 46.11 and SOSA™ Technical Standards.

**Table 6: IPMI Commands**

The following three VITA 46.11 IPMI commands are currently implemented in firmware:

- Get Device ID Command (App (06h) (01h))**  
 This command will return the hardware revision, firmware/software revision, command interface revision, system serial number for the power supply.
- Get Self-Test Results Command (App (06h) (04h))**  
 This command will initiate the power supply to verify all available sensor readings are within specified operating ranges. It will report successful if there are no errors, or it will report the sensor that was out of range.
- Get Sensor Reading Command (S/E (04h) (2Dh))**  
 This command will return the data from one of the available sensors. The following sensors are available:

Self-test Sensor Threshold	Sensor Number	Available Data Sensors	Data Reply Format
OT = 90C	00h	BASEPLATE TEMPERATURE	2 BYTE HEX
OV/UV = +/-5%	01h	VS1 OUTPUT VOLTAGE	2 BYTE HEX
OV/UV = +/-5%	05h	+3.3V_AUX OUTPUT VOLTAGE	2 BYTE HEX
OC = 120% Nom.	07h	VS1 OUTPUT CURRENT	2 BYTE HEX
OC = 120% Nom.	08h	+3.3V_AUX OUTPUT CURRENT	2 BYTE HEX
N/A	0Ah	TURN-ON COUNTER	2 BYTE HEX
