

DTMF Generator Click

PID: MIKROE-4298

DTMF Generator Click is a compact add-on board that generates DTMF (Dual-Tone Multi-Frequency) signals designed for MCU interfaces. This board features the HT9200A, a dual-tone multi-frequency decoder mostly used in mobile communications systems from Holtek Semiconductor Inc.. The HT9200A tone generators can be instructed by an MCU to generate 16 dual tones and 8 single tones from its DTMF pin. It provides a Serial Mode interface, has a low total harmonic distortion and features a low current in the Stand-By mode. This Click board™ is suitable for various applications such as security systems, home automation, remote control through telephone lines, communication systems, and more.

DTMF Generator Click is supported by a mikroSDK compliant library, which includes functions that simplify software development. This Click board™ comes as a fully tested product, ready to be used on a system equipped with the mikroBUS™ socket.

How does it work?

DTMF Generator Click is based on the HT9200A, a dual-tone multi-frequency decoder designed for mobile communication systems from Holtek Semiconductor Inc.. The HT9200A is an SMD tone generator IC designed for MCU interfaces. It can be instructed by an MCU to generate 16 dual tones and 8 single tones from the DTMF pin, and it provides a Serial Mode. The system oscillator of HT9200A consists of an inverter, a bias resistor, and the required load capacitor on a chip. The oscillator function is implemented with a standard 3.579545MHz crystal connected to the X1 and X2 pins of the HT9200A.

Mikroe produces entire development toolchains for all major microcontroller architectures.

Committed to excellency, we are dedicated to helping engineers bring the project development up to speed and achieve outstanding results.

ISO 27001: 2013 certification of informational security management system.
ISO 14001: 2015 certification of environmental management system.
OHSAS 18001: 2008 certification of occupational health and safety management system.

ISO 9001: 2015 certification of quality management system (QMS).

The operation of the HT9200A is based on GPIO signals fed from the mikroBUS™ to the decoder, DAT and CLK. There is a connection between the digital codes and the tone output frequency based on which the desired output frequency is selected. The HT9200A employs a data input, a 5-bit code, and a synchronous clock to transmit a DTMF signal. Every digit of a transferred number is selected by a series of combinations that consist of 5-bit data. The HT9200A will latch data on the falling edge of the CLK pin and display the output data on its output DTMF pin. Then such a signal, via a volume adjustment potentiometer, is sent to an audio amplifier, the [LM386](#) from [Texas Instruments](#) that represents a mono low-voltage amplifier that can be used in a variety of applications. After the audio amplifier, the desired sound can be detected on the on-board speaker.

DTMF Generator Click communicates with MCU using three GPIO pins routed on the CS, RST, and PWM pins of the mikroBUS™ socket labeled as CE, DAT, and CLK. CE pin represents Chip Enable function used to Wake-Up the HT9200A, while DAT and CLK pins stand for data input and data synchronous clock input. It also possesses the adjustable potentiometer labeled as VOLUME that serves to adjust the volume of that signal. It also has a 3.5mm jack output connector that allows the user to use the output DTMF signal in their projects in their own way, while the signal volume still can be adjusted on the VOLUME potentiometer located on the DTMF Generator Click.

This Click board™ is designed to be operated with both 3.3V and 5V logic voltage levels that can be selected via VCC SEL jumper. This allows for both 3.3V and 5V capable MCUs to use the GPIO communication lines properly. However, the Click board™ comes equipped with a library that contains easy to use functions and an example code that can be used as a reference for further development.

Specifications

Type	Signal Processing
Applications	Can be used for various applications such as security systems, home automation, remote control through telephone lines, communication systems, and more.
On-board modules	DTMF Generator Click is based on the HT9200A, a dual-tone multi-frequency decoder designed for mobile communication systems

Mikroe produces entire development toolchains for all major microcontroller architectures.

Committed to excellency, we are dedicated to helping engineers bring the project development up to speed and achieve outstanding results.

ISO 27001: 2013 certification of informational security management system.
ISO 14001: 2015 certification of environmental management system.
OHSAS 18001: 2008 certification of occupational health and safety management system.

ISO 9001: 2015 certification of quality management system (QMS).

	from Holtek Semiconductor Inc..
Key Features	Dual-tone multi-frequency decoder, serial mode, low stand-by current, low total harmonic distortion, and more.
Interface	GPIO
ClickID	No
Compatibility	mikroBUS™
Click board size	L (57.15 x 25.4 mm)
Input Voltage	3.3V or 5V

Pinout diagram

This table shows how the pinout on DTMF Generator Click corresponds to the pinout on the mikroBUS™ socket (the latter shown in the two middle columns).

Notes	Pin					Pin	Notes
	NC	1	AN	PWM	16	CLK	Data Synchronous Clock Input
Data Input	DAT	2	RST	INT	15	NC	
Chip Enable	CE	3	CS	RX	14	NC	
	NC	4	SCK	TX	13	NC	
	NC	5	MISO	SCL	12	NC	
	NC	6	MOSI	SDA	11	NC	
Power Supply	3.3V	7	3.3V	5V	10	5V	Power Supply
Ground	GND	8	GND	GND	9	GND	Ground

Onboard settings and indicators

Label	Name	Default	Description
LD1	PWR	-	Power LED Indicator
JP1	VCC SEL	Left	Power Supply Voltage Selection 3V3/5V: Left position 3V3, Right position 5V
VR1	VOLUME	-	Volume Adjustment Potentiometer

DTMF Generator Click electrical specifications

Description	Min	Typ	Max	Unit
Supply Voltage	-0.3	-	6	V
DTMF Output DC Level	0.45*VC C	-	0.75*VC C	V
Clock Input Rate (Serial Mode)	-	100	500	kHz
Operating Temperature Range	-20	-	+75	°C

Software Support

We provide a library for the DTMF Generator Click on our [LibStock](#) page, as well as a demo

Mikroe produces entire development toolchains for all major microcontroller architectures.

Committed to excellency, we are dedicated to helping engineers bring the project development up to speed and achieve outstanding results.

ISO 27001: 2013 certification of informational security management system.
ISO 14001: 2015 certification of environmental management system.
OHSAS 18001: 2008 certification of occupational health and safety management system.

ISO 9001: 2015 certification of quality management system (QMS).

application (example), developed using MikroElektronika [compilers](#). The demo can run on all the main MikroElektronika [development boards](#).

Library Description

The library covers all the necessary functions to control DTMF Generator board.

Key functions:

- void dtmfgenerator_power_on (void) - Power ON function.
- void dtmfgenerator_transmit_signal (uint8_t *digits, uint16_t delay_m_s) - Transmit a DTMF signal function.

Examples description

The application is composed of three sections :

- System Initialization - Initializes GPIO and start to write log.
- Application Initialization - Initialization driver enables - GPIO, run the power-on sequence, also write log.
- Application Task - (code snippet) This is an example which demonstrates the use of DTMF Generator Click board. DTMF Generator click board DTMF generator transmits the signal for generating tone for digits : "0", "1", "2", "3", "4", "5", "6", "7", "8", "9", "A", "B", "C", "D", "*" and "#". All data logs write on USB uart changes.

The full application code, and ready to use projects can be found on our [LibStock](#) page.

Other mikroE Libraries used in the example:

- GPIO
- UART

Additional notes and informations

Depending on the development board you are using, you may need [USB UART click](#), [USB UART 2 click](#) or [RS232 click](#) to connect to your PC, for development systems with no UART to USB interface available on the board. The terminal available in all MikroElektronika [compilers](#), or any other terminal application of your choice, can be used to read the message.

mikroSDK

This Click board™ is supported with [mikroSDK](#) - MikroElektronika Software Development Kit. To ensure proper operation of mikroSDK compliant Click board™ demo applications, mikroSDK should be downloaded from the [LibStock](#) and installed for the compiler you are using.

For more information about mikroSDK, visit the [official page](#).
