

## Thermo 22 Click

PID: MIKROE-5068

**Thermo 22 Click** is a compact add-on board that provides an accurate temperature measurement. This board features the TMP75C, a high-precision digital temperature sensor from Texas Instruments. The TMP75C houses an integrated digital temperature sensor with a 12-bit analog-to-digital converter (ADC), a reference circuit, and serial interface logic functions in one package. Characterized by its high accuracy (up to  $\pm 0.25^{\circ}\text{C}$  typical) and high resolution of  $0.0625^{\circ}\text{C}$ , this temperature sensor provides temperature data to the host controller with a configurable I2C interface. This Click board™ is appropriate for thermal management and protection of various consumer, industrial, and environmental applications.

Thermo 22 Click is supported by a [mikroSDK](#) compliant library, which includes functions that simplify software development. This [Click board™](#) comes as a fully tested product, ready to be used on a system equipped with the [mikroBUS™](#) socket.

### How does it work?

Thermo 22 Click as its foundation uses the TMP75C, a digital temperature sensor optimal for thermal management and thermal protection applications from Texas Instruments. This temperature sensor is characterized by high accuracy; temperature range of  $0^{\circ}\text{C}$  to  $+70^{\circ}\text{C}$  provides typical  $\pm 0.25^{\circ}\text{C}$  accuracy. The temperature sensing device for the TMP75C is the chip itself. A bipolar junction transistor inside the chip is used in a band-gap configuration to produce a voltage proportional to the chip temperature. The voltage is digitized and converted to a 12-bit temperature result in degrees Celsius, with a resolution of  $0.0625^{\circ}\text{C}$ .

Mikroe produces entire development toolchains for all major microcontroller architectures.

Committed to excellency, we are dedicated to helping engineers bring the project development up to speed and achieve outstanding results.

ISO 27001: 2013 certification of informational security management system.  
 ISO 14001: 2015 certification of environmental management system.  
 OHSAS 18001: 2008 certification of occupational health and safety management system.

ISO 9001: 2015 certification of quality management system (QMS).

The default operational mode of the TMP75C is Continuous-Conversion mode (CC), where the ADC performs continuous temperature conversions and stores each result to the temperature register, overwriting the result from the previous conversion. After the Power-Up cycle, the TMP75C immediately starts a conversion. Alongside CC mode, it also has Shutdown and One-shot modes, which reduces power consumption in the TMP75C when continuous temperature monitoring is not required, typically less than 0.3µA.

Thermo 22 Click communicates with MCU using the standard I2C 2-Wire interface to read data and configure settings. Besides, it also allows the choice of the least significant bit of its I2C slave address by positioning the SMD jumpers labeled as ADDR SEL to an appropriate position marked as 0 and 1. This way, the TMP75C provides the opportunity of the eight possible different I2C addresses by positioning the SMD jumper to an appropriate position. In addition to I2C communication, it also uses an interrupt pin routed to the INT pin of the mikroBUS™ socket, representing the programmable temperature limit feature and alert that allows the sensor to operate as a stand-alone thermostat or an overtemperature alarm for system shutdown.

This Click board™ can be operated only with a 3.3V logic voltage level. The board must perform appropriate logic voltage level conversion before using MCUs with different logic levels. However, the Click board™ comes equipped with a library containing functions and an example code that can be used, as a reference, for further development.

## Specifications

|                  |   |
|------------------|---|
| Type             | Temperature & humidity  |
| Applications     | Can be used for thermal management and protection of various consumer, industrial, and environmental applications                               |
| On-board modules | TMP75C - digital temperature sensor from Texas Instruments  |
| Key Features     | Low power consumption, high precision, overtemperature alert with programmable trip values, shutdown and one-shot mode, high accuracy, and more |
| Interface        | I2C   |

| Ground       | <b>GND</b>  | 8   | GND  | GND | 9  | <b>GND</b> | Ground    |

## Onboard settings and indicators

| Label   | Name     | Default | Description  |
|---------|----------|---------|--|
| LD1     | PWR      | -       | Power LED Indicator  |
| JP1-JP3 | ADDR SEL | Left    | I2C Address Selection<br>1/0: Left position 1,<br>Right position 0 |

## Thermo 22 Click electrical specifications

| Description                 | Min | Typ    | Max  | Unit |
|-----------------------------|-----|--------|------|------|
| Supply Voltage              | -   | 3.3    | -    | V    |
| Temperature Accuracy        | -   | ±0.25  | ±1   | °C   |
| Temperature Resolution      | -   | 0.0625 | -    | °C   |
| Operating Temperature Range | -55 | +25    | +120 | °C   |

## Software Support

We provide a library for the Thermo 22 Click as well as a demo application (example), developed using MikroElektronika [compilers](#). The demo can run on all the main MikroElektronika [development boards](#).

Package can be downloaded/installed directly from NECTO Studio Package Manager (recommended way), downloaded from our [LibStock™](#) or found on [Mikroe github account](#).

## Library Description

This library contains API for Thermo 22 Click driver.

Mikroe produces entire development toolchains for all major microcontroller architectures.

Committed to excellency, we are dedicated to helping engineers bring the project development up to speed and achieve outstanding results.

ISO 27001: 2013 certification of informational security management system.  
 ISO 14001: 2015 certification of environmental management system.  
 OHSAS 18001: 2008 certification of occupational health and safety management system.

ISO 9001: 2015 certification of quality management system (QMS).

## Key functions

- thermo22\_read\_temperature This function reads the temperature data in Celsius.
- thermo22\_set\_temperature\_high\_limit This function sets the temperature high limit at which the overtemperature alert flag is being set.
- thermo22\_get\_int\_pin This function returns the INT pin logic state which indicates the overtemperature alert.

## Example Description

This example demonstrates the use of Thermo 22 Click board™ by reading and displaying the temperature measurements.

The full application code, and ready to use projects can be installed directly from NECTO Studio Package Manager(recommended way), downloaded from our [LibStock™](#) or found on [Mikroe github account](#).

Other Mikroe Libraries used in the example:

- MikroSDK.Board
- MikroSDK.Log
- Click.Thermo22

## Additional notes and informations

Depending on the development board you are using, you may need [USB UART click](#), [USB UART 2 Click](#) or [RS232 Click](#) to connect to your PC, for development systems with no UART to USB interface available on the board. UART terminal is available in all MikroElektronika [compilers](#).

## mikroSDK

This Click board™ is supported with [mikroSDK](#) - MikroElektronika Software Development Kit. To ensure proper operation of mikroSDK compliant Click board™ demo applications, mikroSDK should be downloaded from the [LibStock](#) and installed for the compiler you are using.

For more information about mikroSDK, visit the [official page](#).
