Microwave 6 Click

PID: MIKROE-5773

Microwave 6 Click is a compact add-on board that utilizes the Doppler Shift Phenomenon to sense motion. This board features the PD-V8-S, a high-frequency microwave sensor from Ningbo Pdlux Electronic Technology. The transmitter on this transceiver works on a 5.8GHz frequency over the patch antenna, with a 2-3kHz pulse repetition frequency. The strength of the sensor's output, in other words, the detection range, depends on the Signal-to-Noise ratio. This Click board™ makes the perfect solution for the development of intrusion alarms, automatic door openers, presence-sensing applications, and more.

Microwave 6 Click is supported by a mikroSDK compliant library, which includes functions that simplify software development. This Click board™ comes as a fully tested product, ready to be used on a system equipped with the mikroBUS™ socket.

How does it work?

Microwave 6 Click is based on the PD-V8-S, a high-frequency microwave sensor from Ningbo Pdlux Electronic Technology. This motion sensor is a C-band Bi-Static Doppler transceiver module. It is housed in a metal can and features a built-in resonator oscillator (CRO), providing a stable operation as it improves its front signal-receiving ability and reduces its flank blind area. The module adopts a flat plane antenna suitable for wall mounting. The Microwave 6 Click detects the frequency shift between a transmitted and a received signal reflected from a moving object within the field of view of the transceiver.

The produced low-level output is amplified over the MCP6022, a rail-to-rail input/output operational amplifier from Microchip. The amplified output goes to the ADC SEL jumper, which allows you to read the data over an analog pin of the mikroBUS™ socket or the MCP3221, a low-power 12-bit A/D converter from Microchip. The jumper is set to an analog pin by default. If the option is the ADC, you can count up to 22.3ksps in I2C fast mode.

As mentioned, the Microwave 6 Click uses an analog AN pin of the mikroBUS™ socket or a standard 2-Wire I2C interface of the MCP3221 to communicate with the host MCU. The I2C of the ADC supports standard (100KHz) and fast (400KHz) modes. Depending on the ADC of the host MCU, the onboard 12-bit ADC could be a better choice. Worth noting is that the microwave sensor works on 5V.

This Click board™ can operate with either 3.3V or 5V logic voltage levels selected via the VCC SEL jumper. This way, both 3.3V and 5V capable MCUs can use the communication lines properly. Also, this Click board™ comes equipped with a library containing easy-to-use functions and an example code that can be used, as a reference, for further development.

Specifications

Type	Motion
Applications	Can be used for the development of intrusion alarms, automatic door openers, presence-sensing applications, and more
On-board modules	PD-V8-S - high-frequency microwave sensor from Ningbo Pdlux Electronic Technology
Key Features	Non-contact detection, low wireless power output, low power consumption, low cost, high sensitivity, patch antenna, additional 12-bit analog-to-digital converter, up to 22.3 ksps, uses Doppler shift phenomenon to "sense" motion, and more
Interface	Analog,I2C
ClickID	Yes
Compatibility	mikroBUS™
Click board size	L (57.15 x 25.4 mm)

Input Voltage	3.3V or 5V

Pinout diagram

This table shows how the pinout on Microwave 6 Click corresponds to the pinout on the mikroBUS™ socket (the latter shown in the two middle columns).

Notes	Pin	mikro™ BUS			Pin	Notes
Analog Output	**AN**	1	AN	PWM	16	NC	
	NC	2	RST	INT	15	NC	
	NC	3	CS	RX	14	NC	
	NC	4	SCK	TX	13	NC	
	NC	5	MISO	SCL	12	**SCL**	I2C Clock
	NC	6	MOSI	SDA	11	**SDA**	I2C Data
Power Supply	**3.3V**	7	3.3V	5V	10	**5V**	Power Supply
Ground	**GND**	8	GND	GND	9	**GND**	Ground

Onboard settings and indicators

Label	Name	Default	Description
LD1	PWR	-	Power LED Indicator
JP1	VCC SEL	Left	Logic Level Voltage Selection 3V3/5V: Left position 3V3, Right position 5V
JP2	ADC SEL	Right	Output Signal A/D Selection AN/ADC: Left position AN, Right position ADC

Microwave 6 Click electrical specifications

Description	Min	Typ	Max	Unit
Supply Voltage	3.3	-	5	V
Operating Frequency	5.75	5.8	5.85	GHz
Detection Range	-	180/360	-	deg

Software Support

We provide a library for the Microwave 6 Click as well as a demo application (example), developed using MIKROE compilers. The demo can run on all the main MIKROE development boards.

Package can be downloaded/installed directly from NECTO Studio Package Manager(recommended), downloaded from our LibStock™ or found on Mikroe github account.

Library Description

This library contains API for Microwave 6 Click driver.

Key functions

MIKROELEKTRONIKA D.O.O, Batajnički drum 23, 11000 Belgrade, Serbia
VAT: SR105917343 Registration No. 20490918
Phone: + 381 11 78 57 600 Fax: + 381 11 63 09 644 E-mail: office@mikroe.com
www.mikroe.com

- microwave6_read_raw_adc Microwave 6 read raw ADC value function.

- microwave6_read_voltage Microwave 6 read voltage level function.

- microwave6_set_vref Microwave 6 set vref function.

Example Description

This example demonstrates the use of the Microwave 6 Click board™ by reading and displaying the results of AD conversion and motion detection.

The full application code, and ready to use projects can be installed directly from NECTO Studio Package Manager(recommended), downloaded from our LibStock™ or found on Mikroe github account.

Other Mikroe Libraries used in the example:

- MikroSDK.Board
- MikroSDK.Log
- Click.Microwave6

Additional notes and informations

Depending on the development board you are using, you may need USB UART click, USB UART 2 Click or RS232 Click to connect to your PC, for development systems with no UART to USB interface available on the board. UART terminal is available in all MIKROE compilers.

mikroSDK

This Click board™ is supported with mikroSDK - MIKROE Software Development Kit. To ensure proper operation of mikroSDK compliant Click board™ demo applications, mikroSDK should be downloaded from the LibStock and installed for the compiler you are using.

For more information about mikroSDK, visit the official page.
