

Features

- Excellent DC specifications
 - ◆ Small voltage offset: $\pm 50\mu V$ (MAX)
 - ◆ Small voltage offset drift: $0.2\mu V/^{\circ}C$ (MAX)
 - ◆ Small input bias current: $1.5nA$ (MAX)
- Excellent AC specifications
 - ◆ CMRR: $80dB @ G=1$ (MIN)
 - ◆ Small input noise: $15nV/\sqrt{Hz} @ G=10$
 - ◆ Input noise (0.1 Hz to 10 Hz): $1 \mu V$ p-p
 - ◆ -3dB Bandwidth: $1.6MHz$
 - ◆ Slew rate: $5V/us$
- Gain set with 1 external resistor (gain range 1 to 1,000)
- SUPPLY VOLTAGE: $\pm 2V$ to $\pm 18V$
- RAIL to RAIL for VOLTAGE OUTPUT
- Operating Temperature: $-45^{\circ}C$ to $+125^{\circ}C$
- SOP8, MSOP8 & DFN3X3-8 PACKAGE

- Precision current measurement

Description

The TPA1286 is a low cost, wide supply range instrumentation amplifier that requires only one external resistor to set any gain between 1 and 1,000. The TPA1286 is designed to work with a variety of single voltages. A wide input range and rail-to-rail output allow the signal to make full use of the supply rails. Low voltage offset, low offset drift, low gain drift, high gain accuracy, and high CMRR make this part an excellent choice in applications that demand the best DC performance.

The TPA1286 operates from single 4V to 36V supply, offers breakthrough performance throughout the $-40^{\circ}C$ to $+125^{\circ}C$ temperature range. It features a zero-drift core, which leads to a typical offset drift of $0.2\mu V/^{\circ}C$ throughout the operating temperature range.

TPA1286 is available in SOP8, MSOP8 and DFN3X3-8 package.

Applications

- Weigh scales for bridge amplifiers
- Medical and ECG Amplifiers
- Industrial Process Control
- Precision data acquisition system
- Pressure sensors

Revision History

Date	Revision	Notes
2020/2/5	Rev.Pre.0	Initial Version.
2020/12/25	Rev.A.0	Released version.
2021/3/30	Rev.A.1	Added DFN3X3-8 package.
2022/5/1	Rev.A.2	Updated package outline dimensions.
2024/1/11	Rev.A.3	Added figure 31 to 38: Input Common-Mode Range vs. Output Voltage.

Pin Configuration

PIN NAME	TPA1286 DESCRIPTION
IN-	Negative Input
IN+	Positive Input.
RG	Gain setting
VREF	Reference Input.
OUT	Output
V+	Positive power supply
V-	Negative power supply
Thermal pad	Exposed thermal die pad is internally connected to -Vs. Connect externally to -Vs or leave floating.

Order Information

Model Name	Order Number	Package	Transport Media, Quantity	Package Marking
TPA1286	TPA1286-SO1R	8-Pin SOP8	Tape and Reel, 4,000	1286
	TPA1286U-SO1R	8-Pin SOP8	Tape and Reel, 4,000	1286U
	TPA1286-VS1R	8-Pin MSOP8	Tape and Reel, 3,000	1286
	TPA1286U-VS1R	8-Pin MSOP8	Tape and Reel, 3,000	1286U
	TPA1286U-DF7R	8-Pin DFN3X3	Tape and Reel, 4,000	286U

Absolute Maximum Ratings ^{Note 1}

Supply Voltage 40V

Input Voltage (V-) – 0.3 to (V+) + 0.3V

Differential Input Voltage (V+) – (V-)

Input Current: IN+, IN- ^{Note 2} ±10mA

Operating Temperature Range –40°C to 125°C

Maximum Working Junction Temperature 150°C

Storage Temperature Range –65°C to 150°C

Lead Temperature (Soldering, 10 sec) 260°C

Note 1: Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. Exposure to any Absolute Maximum Rating condition for extended periods may affect device reliability and lifetime.

Note 2: The inputs are protected by ESD protection diodes to power supply.

Operation Overview

The TPA1286 is a monolithic instrumentation amplifier (INA) based on the high voltage, precision zero-drift OPA core, and classic 3-op amp topology. The TPA1286 also integrates precision resistors to ensure excellent common mode rejection and low gain error. The combination of the zero-drift amplifier core and the precision resistors allows this device to achieve outstanding dc precision and makes the TPA1286 ideal for many high-voltage industrial applications.

A unique pinout of the TPA1286U enable to meet a good CMRR specification. The balanced pinout reduces the parasitic that had adversely affected CMRR performance. In addition, this pinout simplifies board layout because associated traces are grouped together. For example, the gain setting resistor pins are adjacent to the inputs, and the reference pin is next to the output.

Applications Information

TPA1286 Application block diagram

Selecting GAIN Resistor

The gain of the TPA1286 is set by a single external resistor, RG, connected between RG pins. The value of RG is selected according to below Equation. TPA1286 can be set as $G = 1$ when no gain resistor is used. Gain accuracy is determined by the accuracy of RG. The stability and temperature drift of the external gain setting resistor, RG, also affects gain. The contribution of RG to gain accuracy and drift can be determined from below equation.

$$G = 1 + \frac{49.4k}{RG}$$

REFERENCE INPUT PIN

High Voltage, Precision, Zero-drift, Instrumentation Amplifier

As shown in above Figure, the reference pin, REF, is connected with a 20 kΩ resistor. The output of the instrumentation amplifier is referenced to the voltage on the REF pin; this is useful when the output signal needs to be offset to a precise mid-supply level. For example, a voltage source can be tied to the REF pin to level-shift the output so that the TPA1286 can interface with an ADC. For best performance, source impedance to the REF pin should be kept as low as possible, because parasitic resistance can adversely affect CMRR and gain accuracy. PCB Layout should be very careful to tie REF to the appropriate local cleaning ground.

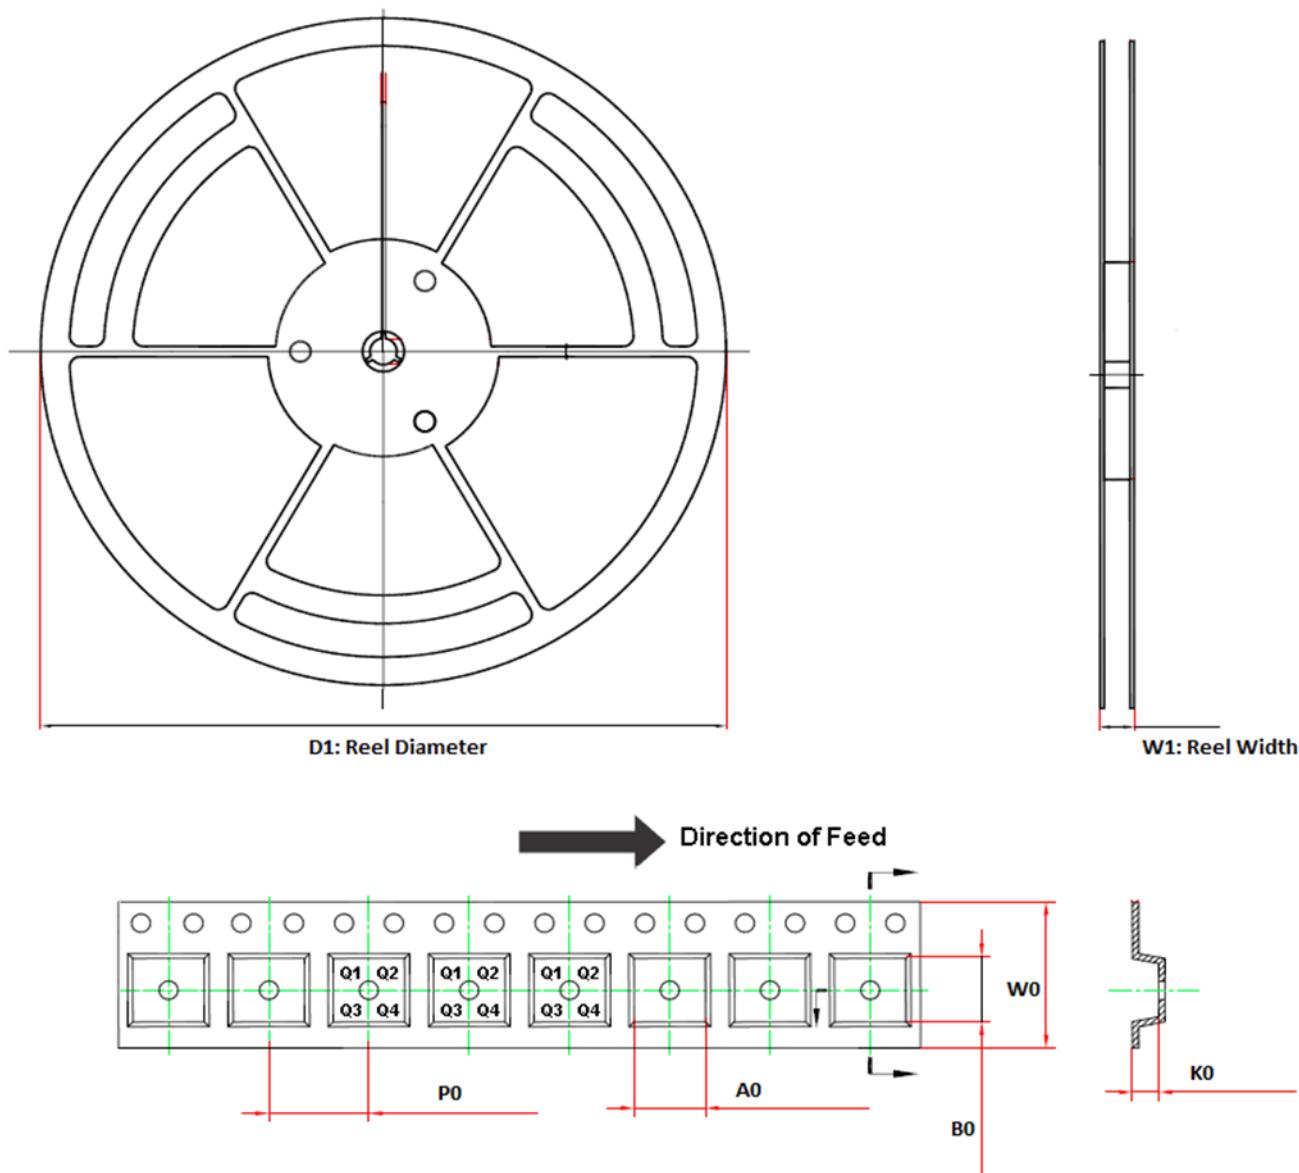

Power Supply Recommendation

A stable and clean dc voltage should be used to be as power supply of the instrumentation amplifier, which noise on the supply pins can affect performance. Bypass capacitors should be used to decouple the amplifier. A 0.1 μF capacitor should be placed close to each supply pin.

Proper Board Layout

To maximize system performance, careful board layout is needed. Traces from the gain setting resistor to the RG pins should be kept as short as possible to minimize parasitic inductance. To ensure the most accurate output, the trace from the REF pin should either be connected to the local ground of the TPA1286, or connected to a voltage that is referenced to the local ground of the TPA1286
