

Features

- Supply Voltage: 2.7 V to 5.5 V
- Offset Voltage: $\pm 2 \text{ mV}$ Maximum
- Bandwidth: 10 MHz, Slew Rate: $8 \text{ V}/\mu\text{s}$
- Low Power: 1.2 mA per channel
- Rail-to-Rail Input and Output
- Low 1/f Noise: $10 \text{ nV}/\sqrt{\text{Hz}}$ at 1 kHz
- No Significant Output Glitch when Power on and off
- -40°C to 125°C Operation Temperature Range

Applications

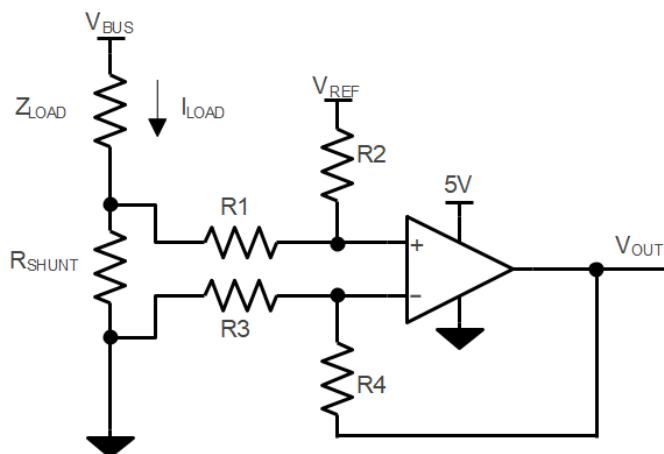

- Instrumentation
- Audio
- Motor Control
- Industrial Control

Description

The TPA658x series of products are CMOS single, dual, and quad RRIO op-amps with low offset, low power, and stable high frequency response. They incorporate 3PEAK's proprietary and patented design techniques to achieve high-performance AC with 10-MHz bandwidth, $8\text{-V}/\mu\text{s}$ slew rate and low distortion while drawing only 1.2 mA of quiescent current per amplifier. The TPA658X devices are suitable for audio and motor control applications.

The TP658x series has isolation during power off even when the signal exits on the input pins as there is no ESD diode from the input pins to the positive power supply pin.

Typical Application Circuit

$$V_{OUT} = (I_{LOAD} \times R_{SHUNT}) \times (R2 / R1) + V_{REF}$$

When $R3 = R1$, $R2 = R4$, $R_{SHUNT} \ll R1$

Revision History

Date	Revision	Notes
2021-11-20	Rev.A.0	Initial version.
2022-04-30	Rev.A.1	Updated package outline dimensions with 3PEAK new POD formats, no change on the product.
2023-03-05	Rev.A.2	Updated status of part number.
2023-06-23	Rev.A.3	Updated POD of DFN2X2 and adjust some of the POD spec.
2023-06-23	Rev.A.4	Updated POD and pin configuration of DFN0.8X0.8.

Pin Configuration

Note: The thermal pad of 8-Pin DFN and 16-Pin QFN is recommended to be left or connected to $-V_S$.

Specifications

Absolute Maximum Ratings

Over operating ambient temperature (unless otherwise noted) ⁽¹⁾.

Parameter	Min	Max	Unit
Supply Voltage, (+Vs) – (–Vs)		6.5	V
Input Voltage	(–Vs) – 0.3	6.5	V
Differential Input Voltage	(–Vs) – (+Vs)	(+Vs) – (–Vs)	V
Input Current: +IN, –IN ⁽²⁾	-10	10	mA
Output Voltage	(–Vs) – 0.3	(+Vs) + 0.3	V
Output Short-Circuit Duration ⁽³⁾		Infinite	
Maximum Operating Junction Temperature		150	°C
Operating Temperature Range	-40	125	°C
Storage Temperature Range	-65	150	°C
Lead Temperature (Soldering, 10 sec)		260	°C

(1) Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. Exposure to any Absolute Maximum Rating condition for extended periods may affect device reliability and lifetime.

(2) The inputs are protected by ESD protection diodes to negative power supply. If the input extends more than 300 mV beyond the negative power supply, the input current should be limited to less than 10 mA.

(3) A heat sink may be required to keep the junction temperature below the absolute maximum. This depends on the power supply voltage and how many amplifiers are shorted. Thermal resistance varies with the amount of PC board metal connected to the package. The specified values are for short traces connected to the leads.

ESD, Electrostatic Discharge Protection

Symbol	Parameter	Condition	Minimum Level	Unit
HBM	Human Body Model ESD	ANSI/ESDA/JEDEC JS-001 ⁽¹⁾	3	kV
CDM	Charged Device Model ESD	ANSI/ESDA/JEDEC JS-002 ⁽²⁾	1	kV

(1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.

(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

Recommended Operating Conditions

Detailed Description

Overview

The TPA658x series is a new family of low-power, rail-to-rail input and output op amplifiers. These devices operate from 2.7 V to 5.5 V, are unity-gain stable and designed for a wide range of general-purpose applications.

Functional Block Diagram

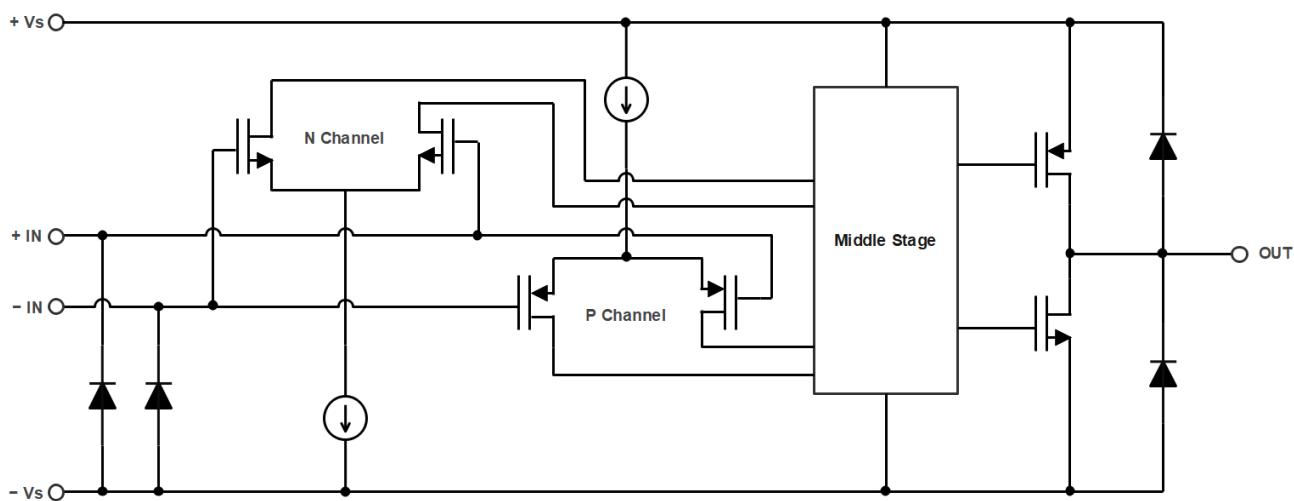

Figure 27 Functional Block Diagram

Feature Description

Operating Voltage

The TPA658x family of op amplifiers is designed for single supply operation from 2.7 V to 5.5 V or dual supply operation from ± 1.35 V to ± 2.75 V.

Rail-to-Rail Input

The input common-mode voltage range of the TPA658x family extends 100 mV beyond the supply rails. This performance is achieved with a complementary input stage: a P-channel input differential pair in parallel with an N-channel differential pair. The P-channel pair is active for inputs from 100 mV below the negative supply to approximately $(+Vs) - 1.5$ V, whereas the N-channel pair is active for input voltages close to the positive rail, typically $(+Vs) - 1.5$ V to 100 mV above the positive supply. There is around 200-mV transition region at $(+Vs) - 1.5$ V where both pairs are on. Within this transition region, PSRR, CMRR, offset voltage, offset drift, and THD can degrade comparing to that operating outside this region.

Rail-to-Rail Output

The TPA658x family delivers rail-to-rail output swing capability with a class-AB output stage. Different load conditions change the ability of the amplifier to swing close to the rails.

No ESD Diode between Input Pins and (+Vs) Pin

There is no ESD diode between input pins and $(+Vs)$ pin, so the voltage at input pins can be applied from 0 V to 5.5 V regardless of the voltage at $(+Vs)$ pin. The feature provides isolation when the device is powered off and the signal still exists at the input pin.

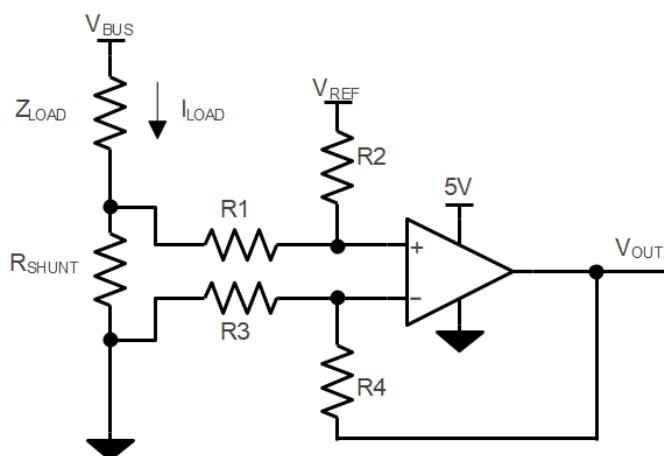

Application and Implementation

NOTE

Information in the following applications sections is not part of the 3PEAK's component specification and 3PEAK does not warrant its accuracy or completeness. 3PEAK's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

Low Side Current Sensing Application

Figure 28 shows the TPA658x is configured in a low-side current sensing application. The low-side current sensing method consists of placing a sense resistor between the load and the circuit ground. The voltage dropping across the resistor is amplified by different amplifier circuits with the TPA658x. The V_{REF} can be used to add bias voltage to the output voltage. Particular attention must be paid to the matching and precision of R1, R2, R3, and R4, to maximize the accuracy of the measurement.

$$V_{OUT} = (I_{LOAD} \times R_{SHUNT}) \times (R2 / R1) + V_{REF}$$

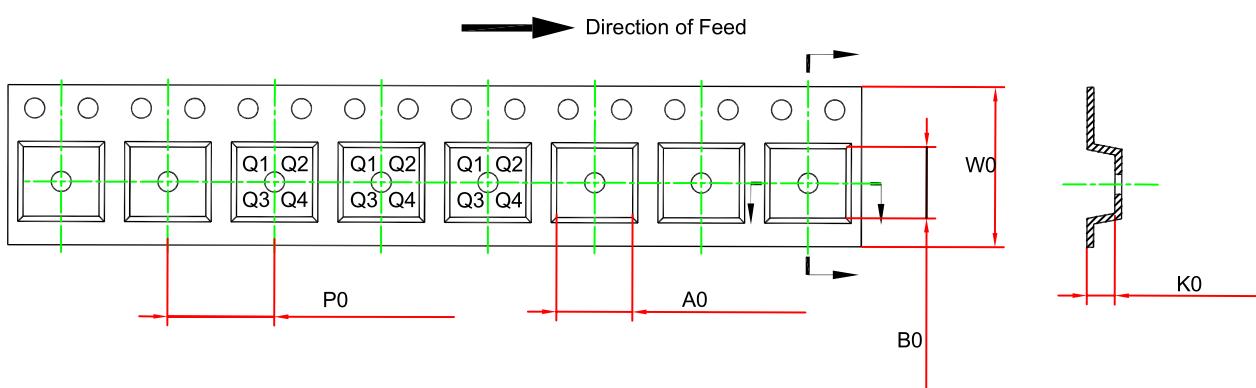

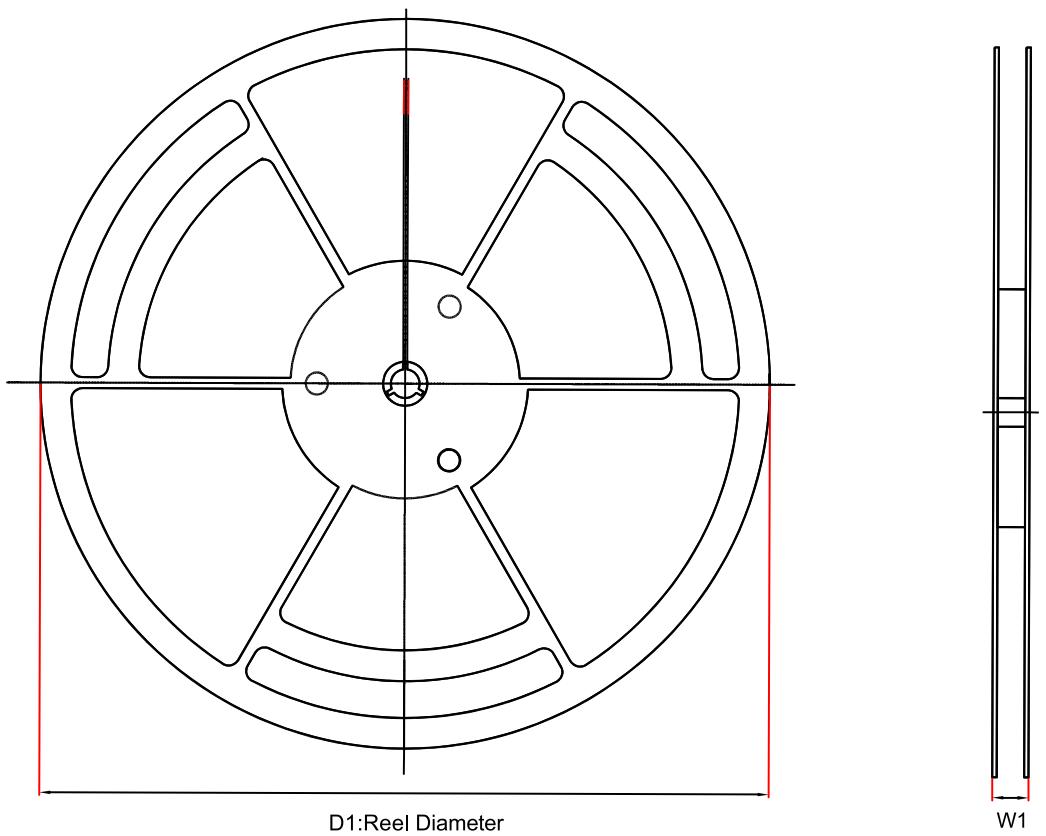

When $R3 = R1$, $R2 = R4$, $R_{SHUNT} \ll R1$

Figure 28 Dual Supply Operation Connections

Power Supply Recommendations

Place 0.1- μ F bypass capacitors close to the power-supply pins for reducing coupling errors from the noisy or high impedance power supplies.
