

Smallest, Most Powerful Solution for Advanced Production Systems

Best for Industrial Networking

Ethernet Information Network

Connects Internet and front office/management information needs with factory floor operation.

- **Remote programming and monitoring** of all the PLCs connected the Ethernet network via a computer running Omron's CX-One software

- **E-mail Transmission** Ethernet module CJ1W-ETN21 is able to send user-created data, error log data and CPU status data as e-mail attachments using a SMTP server.

- **Message Routing Service** built into Ethernet module CJ1W-ETN21 exchanges messages between connected PLCs and host computers without direct program commands.

- **FTP Service (File Transfer Protocol)** Transfer and receive files between Memory Cards in the PLC CPU and computer memory (CJ1W-ETN21 module).

Controller Link Network

Provides high-speed deterministic PLC-to-PLC message and data exchange.

DeviceNet and PROFIBUS-DP Networks

These provide an open network that exchanges device data, messaging and status.

Serial Communications

Omron Serial modules support simple-to-use links with all serial devices to exchange data and make remote settings available to host computers, controller and other serial devices.

CJ1 Features

- Add advanced capability with Special I/O Modules: Position and motion control for 1, 2, 4, 16 or 30 axes; high speed counters; temperature control; analog I/O; and RFID control
- CJ1 PLCs communicate to nearly any third-party device via serial, Modbus-ASCII master, and Modbus-RTU master/slave
- Task oriented programming uses function-block, structured text and ladder logic languages
- One software package (CX-One) is all you need for programming, monitoring, motion controller setup, network configuration and more
- RoHS compliant: contains no lead (Pb) or hazardous materials
- Safety ratings: UL, cUL and CE; UL Class I, Division 2, Groups A, B, C and D for use in hazardous locations; contact Omron for rating details

Specifications

- I/O capacity: CJ1M: 640 I/O and CJ1G: 2560 I/O
- Program capacity: CJ1M: 5K to 20K steps
CJ1G/H: 10K to 120K steps
- Processing speed: CJ1M: 0.1 μ s (using Load instruction)
CJ1G/H: up to 0.02 μ s
- Communications: Ethernet, Controller Link, DeviceNet, PROFIBUS-DP, Serial, CompoBus/S
- Real-time clock: Yes
- Supply voltage: 100 to 240 VAC or 24 VDC
- Dimensions: 90 H x 65 D mm; width depends on model; I/O units are 20 or 31 mm wide

Applications

Reflow oven uses the CJ1G for temperature monitoring and control, and data logging

Small scale machines that do positioning use CJ1M with pulse I/O and built-in inputs/outputs

Typical Configuration

Basic Configuration

A CJ1 Series basic configuration consists of a CPU, power supply unit, and up to 10 basic I/O, special I/O and bus units, and an end cover. Add up the current consumption for all the modules and the CPU, then select the power supply unit suitable for the application.

CPU and Expansion Racks

If the number of modules per rack exceeds 10 or the current consumption is greater than the capacity of the power supply units, use the CPU and expansion rack configuration. This divides the load from the modules across two power supply units. To allow communication and automatic channel assignment in programming, order an I/O control module for the CPU rack and an I/O interface module on each expansion rack.

Industrial Networking and Communications Modules

Transparent message routing: program-free access to field devices and easy, fast data exchange over Ethernet.

Network type	Description	Rating	Current usage	Model
Ethernet, 100 Base Tx/10 Base T	UDP, TCP/IP, FTP server, socket services, DNS client, SMTP (email services), SNTTP (time adjust services), FINS routing	100 Mbps max. speed; 2.5 km distance; 254 nodes; twisted pair cable	0.38 A, 5 VDC	CJ1W-ETN21
Controller Link	Data links and message communications between PLCs and computers; Omron proprietary protocol	2 Mbps max. speed; 1.5 km distance; 62 nodes (using 2 repeater units); shielded twisted pair cable	0.35 A, 5 VDC	CJ1W-CLK21-V1
	PCI board with support software	Shielded twisted pair cable	--	3G8F7-CLK21-EV1
DeviceNet	Master unit provides remote I/O and message communications; functions as master and/or slave	500 kbps; 500 m distance; 63 nodes; DeviceNet cable; can control up to 32,000 points max. per master	0.33 A, 5 VDC	CJ1W-DRM21
Profibus-DP	Master unit provides data exchange, diagnostics and message communications	12 Mbps; 1200 m distance; 125 nodes; shielded twisted pair cable; allows 7,168 words of I/O data per PLL; one RS-485 port	0.40 A, 5 VDC	CJ1W-PRM21
	Slave unit	Max. 180 words of input and output; one RS-485 port	0.40 A, 5 VDC	CJ1W-PRT21
CompoBus/S distributed I/O	Master unit remote I/O data exchange with 256 points	750 kbps; 500 m distance; 32 nodes; 2- or 4- conductor VCTF cable	0.15 A, 5 VDC	CJ1W-SRM21
Serial	Exchanges data using Protocol Macro for automatic handshaking with Omron serial devices (CompoWay/F); Host Link to computers; and 1:N NT link for Omron HMIs; Modbus and user-defined protocols	Two RS-232C ports	0.28 A, 5 VDC	CJ1W-SCU21-V1
		Two RS-422/RS-485 ports	0.38 A, 5 VDC	CJ1W-SCU31-V1
		One RS-232C port and one RS-422/RS-485 port	0.38 A, 5 VDC	CJ1W-SCU41-V1
	RS-232C to RS-422A Conversion module	1 RS-232C port and 1 RS-422A terminal block	0.15 A, 5 VDC	NT-AL001-E
	RS-232C to RS422/RS-485 adapter	Used for serial PLC Link with CJ1M. Converts an RS-232C port to an RS-422/RS-485 port. Mounts directly to the CPU.	--	CJ1W-CIF11

Programming and Diagnostic Software

One Software

CX-One is the single programming and configuration software used to build and program networks, PLCs, HMIs, motion control systems, drives, temperature controllers and sensors. It provides seamless communications between system components because they all speak a common language. The benefit of using a single software is reduced complexity of configuration so it can be completed with minimal training.

One Connection

With CX-One software and one connection to your machine, you can fully access all settings, programs and configurations. Upload and download all programs, comments, settings, fieldbus configurations, HMI and intelligent device configurations. You can gain remote access to service your complete machine, and reset and restart operations from an HMI.

One Minute

Accomplish more every minute with Omron's "drag-and-drop" functionality. It simplifies control system configuration and HMI visualization so projects are completed in minutes instead of days.

Our pre-built object libraries only require you to add parameters to automatically establish communications with Omron devices.
