Panels for
electrical
distribution

Auto/Off/On output module 10 A

- Auto/Off/On output module intended to permit the automatic control of pumps, blowers or motor groups. Or, in the case of installation, maintenance or failure, to permit the load equipment to be turned "Off" or turned "On"
- Ideal interface for PLC and electronic systems
- Only 11.2 mm wide
- 3 function selector switch:
 - Auto: works as a monostable relay (following A3 input)
 - Off: relay permanently OFF
 - On: relay permanently ON
- 24 V AC/DC supply and module input
- 35 mm rail (EN 60715) mounting

Application examples:

- control of pumps, blowers or motor groups
- primarily suited to Industrial control systems

Contact specification

Contact configuration		1 CO (SPDT)
Rated current/Maximum peak current	A	10/15
Rated voltage/Maximum switching voltage	V AC	250/400
Rated load AC1	VA	2500
Rated load AC15 (230 V AC)	VA	500
Single phase motor rating (230 V AC)	kW	0.44
Breaking capacity DC1 (24/110/220 V)	A	10/0.3/0.12
Minimum switching load	mW (V/mA)	300 (5/5)
Standard contact material		AgSnO ₂

Feedback contact specification (terminals B1-B2)

Contact configuration		1 NO (SPST-NO)
Maximum current	mA	300
Rated voltage	V AC/DC	24

Supply & Input specification

Nominal voltage (U _N)	V AC (50/60 Hz)	24
	V DC	24
Rated power	VA (50 Hz)/W	0.6/0.4
Operating range	AC	(0.8...1.1)U _N
	DC	(0.8...1.1)U _N

Technical data

Ambient temperature range	°C	-20...+50
Protection category		IP 20

Approvals (according to type)

19.21.0.024.0000

- 1 CO output contact
- 11.2 mm wide
- Feedback contact

B1-B2 feedback to the controller signaling Auto-operation
A3-A2 "Auto" signal from Controller

**Analogue override module - Auto/Hand
(0...10)V**

- Analogue output module intended to provide, by the selection switch on the front panel, a (0...10)V output, automatically or by hand.
- With the selector switch in position "A" (Automatic) the (0...10)V signal is derived from the controller.

B

In position "H" (Hand) the controller signal is ignored and the (0...10)V signal is derived directly from the potentiometer setting on the face of the module

- The level of the (0...10)V output signal is displayed by 3 green LEDs, set at > 25%, > 50% and > 75%.

- 24 V AC/DC supply
- 35 mm rail (EN 60715) mounting

Application examples:

- permits the direct control of proportional valves under exceptional circumstances or where the automatic controller has failed

Wiring diagram**19.50.0.024.0000**

- Analogue output (0...10)V, plus 1 feedback output contact
- 17.5 mm wide
- LED indicator

53-54 feedback to the controller signaling Auto-operation

 $Y_{in}-A2$ variable (0...10)V DC from the controller

Hand (0...10)V DC value set by the potentiometer

Nominal voltage (U_N)	V AC (50/60 Hz)	24
	VDC	24
Rated power AC/DC	VA (50 Hz)/W	0.9/0.7
Operating range	AC	(0.8...1.1) U_N
	DC	(0.8...1.1) U_N

Technical data

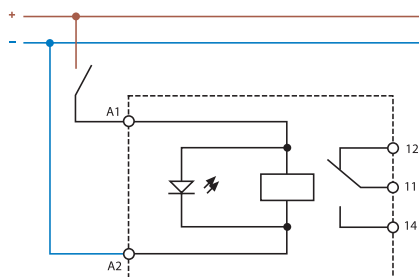

Ambient temperature range	°C	-20...+50
Protection category		IP 20

Approvals (according to type)

Power relay module 16 A

- Suitable for Lamps load
- AgSnO₂ contacts for heavy duty, high inrush current loads
- DC supply (12 or 24 V)
- LED indicator
- Reinforced insulation between supply and contacts
- Cadmium Free contacts
- 35 mm rail (EN 60715) mounting

Wiring diagram

For outline drawing see page 9

Contact specification

Contact configuration	1 CO (SPDT)
Rated current/Maximum peak current	A 16/30 (120 A - 5 ms)
Rated voltage/ Maximum switching voltage	V AC 250/440
Rated load AC1	VA 4000
Rated load AC15 (230 V AC)	VA 750
Nominal lamp rating (230 V):	
incandescent/halogen W	2000
fluorescent tubes with electronic ballast W	1000
fluorescent tubes with electromagnetic ballast W	750
CFL W	400
230 V LED W	400
halogen or LED with electronic ballast W	400
halogen or LED with electromagnetic ballast W	800
Minimum switching load	mW 300 (5 V/ 5 mA)
Standard contact material	AgSnO ₂

Coil specification

Nominal voltage (U _N)	V DC 12 - 24
Rated power DC	W 0.5
Operating range	(0.8 ... 1.1)U _N

Technical data

Mechanical life AC/DC	cycles 10 · 10 ⁶
Electrical life at rated load AC1	cycles 80 · 10 ³
Operate/release time	ms 12/8
Ambient temperature range	°C -20...+50
Protection category	IP 20

Approvals (according to type)

19.91.9.0xx.4000

- 1 Pole changeover contact
- 17.5 mm

Switching actuator with KNX technology - 16 A**Type 19.3K.9.030.4300**

- 6 relays for 3 roller shutters
- Logically interlocked outputs
- Slats management (3 different types)

Type 19.6K.9.030.4300

- Compact and powerful switching actuator with 6 relay outputs
- 6 output contacts rated 16 A 250 V AC, individually configurable NO or NC
- Time functions (ON, OFF, Blink, Staircase)
- Independent logic and analog functions for each output (AND, OR, XOR, THRESHOLD, WINDOW)

- LED status indicator for each output
- Scenario Management
- Output control area for manual control
- Supply voltage via KNX bus
- 35 mm rail (EN 60715) mounting

19.3K/19.6K
Screw terminal

Protection category		IP 20	IP 20

Approvals (according to type)

NEW 19.3K.9.030.4300

- Bistable relay ENEC approved
(Maximum peak current up to 120 A)
- Suitable for up to 3 roller shutters
- Slats management

19.6K.9.030.4300

- Bistable relay ENEC approved
(Maximum peak current up to 120 A)
- Suitable for lamp loads

Application notes

Intervention Modules

The demand for security apparatus, heating, air conditioning or efficient energy use in offices, hotels, and private homes or in industrial space is growing constantly, leading to the installation of increasingly complex electronic systems. But what happens if these systems malfunction and a qualified service technician will only be available in a few hours, or even days?

With the use of carefully installed intervention modules, a trained caretaker or security guard can be in a position to recognize interruptions in service, and by manual intervention perform the necessary override actions to maintain system operation until a repair can be effected.

Digital Override control module

Auto-Off-On output module (Type 19.21)

Many processes or systems are automatically controlled by an electronic control system or by a Programmable Logic Controller.

In the event of an electronic system malfunction it is important, in order to avoid damage or downtime, to plan for the possibility of controlling the process manually. An Auto-Off-On Module can provide this, located between the output of the electronic system (Controller) and the process to be controlled (End Process) - bypassing the malfunctioning control unit in a planned way. For malfunctioning electronic systems, the process to be controlled can be manually switched On or Off, as needed, using the switch on the front of the unit. Under healthy functioning of the electronic system, the switch is left in the Auto position. In this configuration the process is controlled by the normal functioning of the electronic system and its output. It may be important to know (remotely) if the process is being controlled manually or automatically, in which case the feedback contact on the Auto-Off-On module 19.21 can provide this.

Analogue Override control module

Analogue output module (0...10)V (Type 19.50)

This module can be installed where there is need to give a manually adjustable analog signal (0...10)V priority over an analog signal from a electronic control unit or PLC, or to override and replace a malfunctioning signal.

The Analogue override module provides, by the selection switch on the front panel, a (0...10)V output signal either generated automatically or by hand. With the selector switch in position "A" (Automatic) the (0...10)V signal at Y_{out-A2} is derived from the controller signal applied to terminals Y_{in-A2} . In position "H" (Hand) the controller signal is ignored and the (0...10)V signal is derived directly from the potentiometer setting on the module front panel.

Operation in switch position H is indicated by a blinking yellow LED, and by the opening of contact 51-52 – which could be used to report the override condition to the central control room.

The level of the (0...10)V output signal is displayed by 3 green LEDs, set at > 25%, > 50% and > 75%
