#### Description

The PE831R1024 is a dual junction isolator offering 40 dB minimum of isolation over an operational frequency band of 11 to 18 GHz. This coaxial part uses SMA female connectors on all ports and has a power rating of 5 watts in forward and 1 watt in reverse direction.

Pasternack Enterprises offers a wide variety of isolators to fit your needs. These are two-port devices that transmit microwave or radio frequency power in one direction only and block the signal in the opposite direction. They can be thought of as a diode for RF energy. Isolators are used to isolate equipment from the effects of conditions outside of the equipment. For instance they are used to prevent a microwave source being detuned by a mismatched load. Pasternack's isolators feature excellent insertion loss, high isolation and reliability.
