

Wireless Systems

10 MHz to 6 GHz N Bias Tee Rated to 2500 mA and 100 Volts DC

Bias Tees Technical Data Sheet

PE1612

Features

- · 10 MHz to 6 GHz Frequency Range
- Isolation 30 dB Typ

- Insertion Loss < 1.25 dB
- 2,500 mA / 100 VDC Bias

Applications

- · Amplifier Biasing
- DC Return / Block
- Transmitting Power With a Single
- Coax
- Test and Measurement
- Communication Systems

Description

Pasternack's PE1612 is a type N bias tee (also known as bias T) that operates from 10 MHz to 6 GHz with a bias rating of 2,500 mA and 100 VDC. This bias tee is configured with type N inputs on the RF ports and solder pin on the bias port. PE1612 type N bias T offers good electrical performance featuring 1.25 dB max insertion loss and 30 dB typ isolation.

Bias tees are typically used to inject a DC signal into an RF path such as when biasing an amplifier or any other active device, supplying power to the connected output without disrupting the RF signal. They can also be used as DC returns to provide a ground return path for the input device or DC blocks to prevent direct current signals from flowing through the output device. Pasternack's bias tees are available in various connector configurations over different frequency bands to fit your needs, all of which ship the same day.
